PRODUCT DETAILS/INFORMATION

Canadian-based Neff Kitchens creates traditional, world-class designer cabinetry. Craftsmen hand sand, carve, detail, and finish each piece. Dozens of styles come in 5100 colors – you'll meet your match! Neff materials and finishes prevent warping, expansion, or peeling. They are certified under the Environmental Stewardship Program (Kitchen Cabinet Manufacturer's Association) and strict CARD (California) standards.

Traditional Neff cabinet drawers and rollouts are constructed with solid maple sides. The drawers are 16" deep (industry standard is 12") to accommodate larger dinnerware. Interior cabinets use high gauge, surgical grade steel. The cabinets feature soft close drawers, under mount slides, full drawer extensions, and bear up to 90 lbs. at full extension.

Industry standard 30" high doors have two hinges and two shelves, but Neff's standard is three hinges and three shelves. Neff's integrated gasket is fitted to cabinet edges to cushion door closings. An integrated lighting system affords a continuous finished bottom of the wall cabinet and eliminates visible light valances. Neff overlay door styles also eliminate any possible visible cabinet seams.

Installers love Neff cabinetry. Galvanized steel legs adjust for floor and wall imperfections, so door leveling is easy. Wall cabinets include a heavy gauge railing system. Channels allow for lighting and electrical cables. To ensure optimum quality control, all finishing takes place in Toronto -- no painting or lacquering, and the gases that accompany them, take place inside your home.

The Canadian exchange rate favors the U.S. dollar. Neff Kitchen cabinets offer a good value for the dollar, especially over premium European cabinets. Neff also ships from Canada to the Chicago area in eight hours.
