Healthy Learning Environments

BARRINGTON HIGH SCHOOL is among many in Illinois that have adopted the PathoSans® cleaning technology, a system that offers all the benefits and protection of chemical-based cleaners, yet offers a much healthier option for those who clean, and the people in the buildings. PathoSans' effective, environmentally responsible commercial and residential cleaning products kill 99.99% of bacteria, but that is just the beginning. Most disinfectants only claim to work when left to dwell on a surface for several minutes. PathoSans' electro-chemically activated solutions kill bacteria in seconds and help prevent bacterial infections, fungal infections, viral infections, and odors through removal of soils. The solution is basically a salt and water combination that is electrified. There are no dyes and other chemicals left behind which can make surfaces sticky and smelly. It leaves everything cleaner, especially after 30 days of consecutive use, where previous cleaner residue is removed completely.

Grant Mackall, who works at BHS on behalf of commercial cleaning company GSF-USA, manages a crew 20 or more service operators who clean BHS nightly. They have a PathoSans machine that can produce gallons of the solutions on-site, offering measurable sustainability benefits. "This is the best

and only way to responsibly and effectively clean, especially in the education market," Mackall said. "There are no dyes, fragrances, or other eye or skin irritants."

PathoSans Technologies has local ties, as it is the newest innovation and Division of Spraying Systems Co., a spray technology manufacturer and global leader located in Wheaton, Illinois. Spraying Systems Co. was founded by and is still owned by the Bramsen family, long-time Barrington residents.

RESIDENTIAL USE

Barrington resident Leslie Roberts has used both PathoPure-Cleaner and Degreaser, and PathoNex-Hospital Broad-Spectrum Disinfectant/Food Contact Surface Sanitizer/Virucide for two years.

"I use PathoPure at least five times a day, in the kitchen (on non-porous surfaces) on countertops, cabinets, chrome, cooking surfaces, sinks, mirrors, glass, and oven doors" Roberts said. "I clean everything in my bathrooms with it. I spot clean table linens, clothes, and rugs with PathoPure. I use it on everything from hiking shoes to my mailbox. Everything seems to stay clean, longer" she said. Initially, she used PathoPure on glass and mirrors, even eyeglasses, to get rid of the residue from other cleaning products. "Once that stuff is

gone, your surface is super clean and stays that way longer," she said.

For getting rid of bacteria and viruses, Roberts turns to PathoNex and uses it twice a week. "The best way to sanitize is to first clean by using PathoPure, then spray PathoNex. Wait 10 minutes, then wipe clean." She recommends using a microfiber cloth and clean in the direction of an "S," and not an "O," where you are just moving the dirt in a circle.

"Using the products is addicting! It's so safe because it's only water, salt, and electricity! If children or animals get into it, by mistake, nothing happens," Roberts said. "In times of COVID-19, I find my hands are softer because I sanitize them by using the three-ounce spray bottle of PathoNex (on them and my sunglasses) that I keep in my cars. My house feels cleaner, and I feel good about not contaminating the earth with chemicals," she said.

"Offices, schools, hospitals, corporations, convention centers, restaurants, hotels, government buildings, and the like should be using the PathoSans Systems to make their own products to clean with," Roberts said. "It would be doing their part for Mother Earth and those we all love living on this earth."
